Amit Agrawal

Senior Backend Engineer | Distributed Systems

+91-7869414716 | amitagrawal235@gmail.com | amitagrawal235

Technical Skills

- **Languages**: Go, Java, Python, TypeScript, JavaScript, SQL
- **Backend & Infrastructure**: AWS, Kubernetes, Docker, Kafka, ClickHouse, Redis, MongoDB, Node.js, GraphQL
- **AI**: LLMs, RAG, Agent Orchestration, MCP, Vector Search, LLM Evaluation

Experience

Prosperr.io

Software Development Engineer 3 — May 2026 – Present

- Leading engineering team for intelligent automation within an **AI-powered financial platform**, driving technical direction and execution.
- Re-architected a tightly coupled backend into modular, well-defined components. Redesigned database schemas and access patterns and established clear module boundaries, enabling team to develop components with reduced cross-system dependencies.
- Established engineering practices across code reviews, testing, and development workflows to improve code quality, maintainability, and team productivity.
- Implemented infrastructure deployment workflows using **AWS CDK**, enabling infrastructure-as-code and repeatable deployments.

Stealth AI Startup

Artificial Intelligence Consultant — June 2025 – Jan 2026

- Architected and deployed scalable backend systems in **Java** on **Kubernetes** for AI-powered data platforms.
- Built orchestration pipelines integrating **RAG** and enterprise **MCP servers** like ServiceNow and SAP to create AI-powered workflows.
- Designed a multi-stage agentic pipeline enabling natural language querying over structured databases.
- Developed scalable agent infrastructure in **Python** with CI/CD pipelines and **MCP registry** for integrating LLMs with external services.

Plotline, Inc. (Founding Team)

Software Development Engineer 3 — Jun 2024 – May 2025

Software Development Engineer 2 — Apr 2022 – Jun 2024

- Led a team of 6 engineers from prototyping to production, establishing structured engineering processes across code reviews, hiring, onboarding, and mentorship.
- Built **CI/CD pipelines** with automated testing to improve release velocity, quality, and system reliability.
- Developed a highly scalable backend with **Go** (core systems) and **Node.js + GraphQL** (dashboard APIs), handling peak load of **5M RPM** and more than **1B+ API calls daily (P90: 0.4s, P99: 1s)**.
- Designed a Kafka-based event-driven segmentation system processing **10B+ events/day** for real-time user targeting.
- Built centralized logging, monitoring, and alerting infrastructure using **Datadog** and **Better Stack**, achieving a **99.9% SLA**.
- Architected and supervised implementation of a multi-channel communication system delivering **5M+ messages/day** across Webhooks, Push, WhatsApp, Email, In-app overlays.

Simply Vyapar Apps Pvt. Ltd.

Software Development Engineer 2 — Jun 2021 – Apr 2022

- Integrated Razorpay payments and built a reconciliation system using **Node.js**, resulting in a **20%** reduction in transaction drop-offs and improved conversion rates in licensing process.
- Built a partner management platform with dashboards and licensing workflows for internal and field partners, including automated distributor commission disbursement.
- Developed a bulk licensing automation pipeline enabling hourly onboarding of subscribers from a large B2B marketplace, eliminating manual processing and improving operational efficiency.

Hyperverge, Inc.

Software Development Engineer 1 — Jun 2020 – Jun 2021

- Developed a cloud-agnostic identity verification and fraud detection stack using **Node.js** and **Python** for SEA nations.
- Transitioned core services to an asynchronous, event-driven architecture and set up performance monitoring and alerting system, reducing latency by **40%**, achieving **99.999% uptime** and maintaining **<0.01% error rate**.
- Set up a Kubernetes-based job scheduling system for model training workloads, improving GPU utilization by **60%**.

Morningstar, Inc.

Technology Intern — Jul 2019 – Dec 2019

- Implemented microservices to streamline ETL workflows enabling faster onboarding of new data sources.
- Developed an event-driven calculation engine for daily computation of financial indices for more than 400k securities.

Education

Birla Institute Of Technology and Science, Pilani — 2020

B.E. (Hons.) + M.Sc. (Hons.)
